

**iQ-Gift Cards is our integrated gift card program that works with
roomMaster and iQ-Point of Sale**

With iQ-GiftCard, you have a cost effective way to promote your business that's better and more affordable than most.

Unlike most systems in which the purchase price of the gift card is held by the card processor until the card is redeemed, iQ-GiftCard is free of transaction fees* and when you sell a gift card the money stays with you!

Gift cards are a \$100-billion-per-year phenomenon! Merchants of all types and sizes are using gift cards in a variety of ways. Besides just selling gift cards, they can be used to give back balances on folios instead of cash or as promotional items such as discounts and coupons.

With the InnQuest Gift Card System

- There are no terminal fees or equipment you need to buy!
- You can process Gift Cards on any computer using roomMaster or iQ-POS.
- You can create "Virtually Loaded Cards" such as "prepaid cards" that you can hand out as promotional items or coupons.
- It's your money - all deposits on gift cards remain with you.
- Your Gift Cards can be used across your chain or brand, allowing customers to load a card at property A and use it at property B.
- All merchants can setup their own expirations and escheatment laws with an administrator at InnQuest Software, such as having the system automatically expire cards after being loaded or last used.
