

iQ-Scan

The iQ-Scan module allows your staff to scan driver's licenses (US, Canadian, Australia, New Zealand, Israel Malaysia and European Union) as well as all passports.

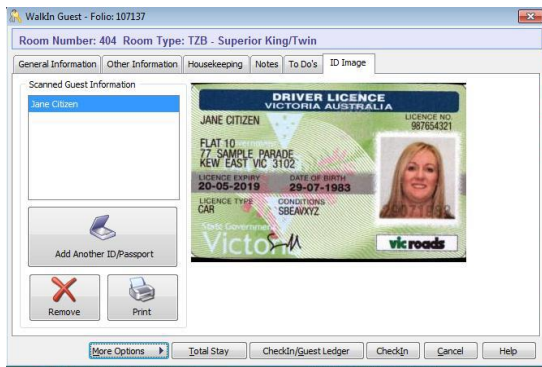

The information is automatically transferred directly into roomMaster as well as optionally attaching the image/picture to the folio for identification security.

Image options include face and/or full ID image, and managers can designate the different security options. The scanner can be purchased with or without passport scanning and is only compatible with scanning software which uses a certified integration format.

iQ-Scan options:

Driver's License: Name, Address, Sex, Date of Birth, License Number, face and full ID image to be stored - six for each folio.

Passport: Name, Date of Birth, Passport Number, Date of Issue and Date of Expiration, face and full ID image to be stored - two for each folio.

InnQuest Australia sells two scanning options:

1. High-speed scanner to scan Driver's Licences and Passports.
2. High-speed scanner to scan Driver's Licences only.

Scanners can be shared at the front desk between multiple computers to lower costs and images can also be purged after a certain time-frame after checkout.
